TUBE HOME

OFFICIAL PRIVACY & STREAMING POLICY

Simple, Secure & 100% Private Client-Side Streaming Architecture

DOCUMENT ID: TH-PRIV-2026	**OPERATING MODEL: Real-Time Client Media Player**
DATA STORAGE: On-Device Only (No Cloud DB)	**CLASSIFICATION:** Public Transparency Policy

COMMITMENT TO USER PRIVACY:
TUBE HOME is engineered as an independent, client-side streaming player. The software is designed with privacy by default: it operates no centralized user database, requires no sign-ups or credentials, collects zero personal data, and embeds zero commercial advertising or behavioral tracking SDKs. All interactions remain strictly on your personal device.

1. 100% Private & Anonymous (No Accounts Required)

Tube Home values your privacy above all. The application does not require any account registration or login. We do not collect names, emails, phone numbers, passwords, or personal identifiable information. Your watchlist, favorites, and viewing history stay strictly on your local device and are never uploaded.

2. Live Real-Time Streaming (Personal Use)

All media is streamed online in real-time as chosen by you for personal, non-commercial viewing. The application functions strictly as an independent client media player and does not host, upload, or store video files. The software does not provide video downloads or permanent offline storage.

3. Essential Permissions Only

Requested Android permissions are strictly limited to core playback functionality:

- **Internet:** Required to connect to media streams in real-time.
- **Network State:** Detects network connectivity changes to prevent playback failure.
- **Screen Awake (Wake Lock):** Keeps your display on while actively watching video.
- **TV Streaming:** Connects with your smart TV or Google Cast device on your local Wi-Fi.
- **Notifications (Optional):** Delivers optional alerts for updates and new releases (can be disabled anytime).

4. Complete User Control & Data Sovereignty

You have complete ownership over your application data. No viewing habits are tracked, monetized, or shared. You can instantly delete all local viewing history, bookmarks, and temporary cache anytime with a single tap via *'Clear Media Cache'* in the Profile settings.

ARCHITECTURE CERTIFICATION Client-Side Media Player Model • Real-Time Playback Platform: Android 8.0 - Android 15 • Official Client Release	**PRIVACY SEAL** ✓ 100% Anonymous & Private ✓ Zero Personal Data Collection ✓ Zero Trackers or Commercial Ads
